I study how models learn representations and dynamics of the world and turn them into grounded behavior, from language to physical action, and what internal computations give rise to that behavior.

- **Physical AI:** representation learning, post-training, and analyses for robot control with World Action Models and Vision-Language-Action (VLA) models. [C25, C22, C18, W5, W4]
- **Interpretability of (M)LLMs:** mechanistic analysis of reasoning and information flow across LLMs, VLA models, and omnimodal LLMs. [C24, C20, P1, P2, W3, C11]
- **LLM post-training and agents:** on-policy distillation, memory agents, and video editing agents (ongoing / under review).
- **Scalable representation learning:** self-supervised representation learning and masked image modeling. [C18, C16, C15, C17, C11]
